

XVIII Polish Workshop on Relativistic Heavy-Ion Collisions: Strange and Heavy Flavour Physics

Contribution ID: 6

Type: **not specified**

Heavy-ion program of the HADES experiment at GSI

We report the recent results from the HADES experiment obtained in Au+Au and Ag+Ag collisions at center-of-mass energies per nucleon pair of 2.42 and 2.55 GeV, respectively. In particular, measurements of hadronic and dilepton observables are presented, with focus on particle correlations and prospects for the future experimental program are outlined.
